Installation and Setup

Windows Setup

- 1. Creating an virtual environment using Python >= 3.8
- 2. py 3.8 -m venv env
- 3. Activate the env
- 4. env\Scripts\activate.bat
- 5. Installing the Python libraries
- 6. pip install -r requirements.txt
- 7. Download unofficial Tesseract for Windows
- 8. Adding the path of Tesseract

Linux Setup

- 1. Creating an virtual environment using Python >= 3.8
- 2. python3 -m venv env
- 3. Activate the env
- 4. source env\bin\activate
- 5. Installing the Python libraries
- 6. pip install -r requirements.txt
- 7. Easy install for Google's Tesseract OCR: sudo apt install tesseract-ocr

Instructions to start up

- 1. Activate the environment first then type streamlit run main.py
- 2. First time run would take a bit longer as it downloads a 1.5GB of dataset
- 3. Paste the text

OR

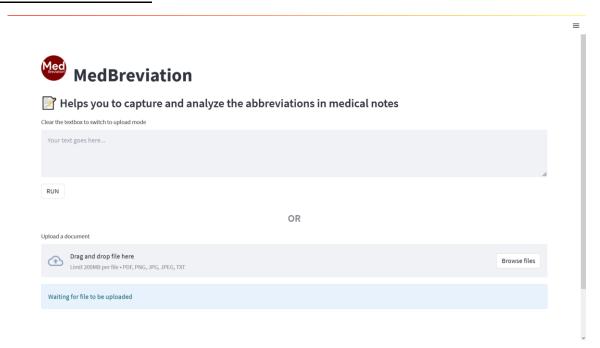

4. Upload the file (only accept PDF (Text-extractable), PNG, JPG, JPEG, TXT at the moment)

For more detailed explanation of how to use it, check the next page.

How To Use?

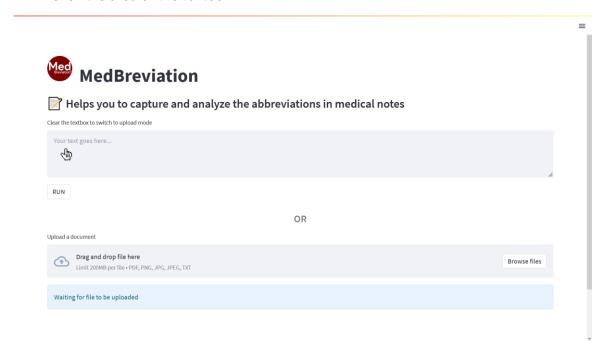

Overview User Interface

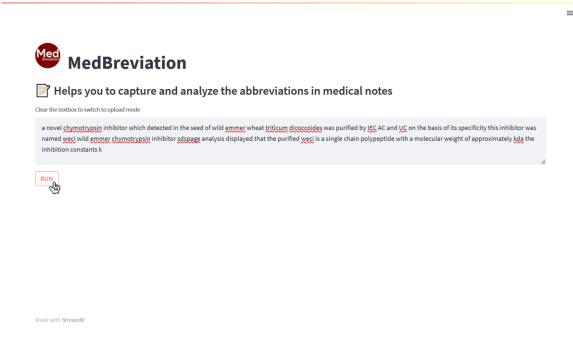

Recognizing the abbreviation (2 methods)
